

ANAMUL ISLAM

Junior Network Engineer | Network Support | NOC

Dhaka, Bangladesh | 01764162669 | anamulislamsumon01@gmail.com | [linkedin.com/in/anamul-islam-sumon](https://www.linkedin.com/in/anamul-islam-sumon) | github.com/anamul24 | anamul-islam.vercel.app

SUMMARY

Final-year CSE undergraduate specializing in network engineering and IT infrastructure, with hands-on training on live Cisco hardware covering VLANs, inter-VLAN routing, OSPF, NAT, ACLs, subnetting, and structured troubleshooting. Comfortable on both physical equipment and Cisco Packet Tracer enterprise labs, currently expanding into MikroTik and ISP networking. Also brings MERN stack development experience.

CORE NETWORKING SKILLS

Routing & Switching: Cisco IOS, VLAN, VTP, 802.1Q Trunking, Inter-VLAN Routing, STP/Rapid PVST+, EtherChannel/LACP, Port Security, DHCP Snooping, Dynamic ARP Inspection

Routing & IP Services: OSPF, RIP, Static Routing, HSRP (FHRP), DHCP, DNS, NAT (Static/Dynamic/PAT), NTP, VLSM/Subnetting, IPv4 & IPv6 Addressing

Security & Access: Standard & Extended ACLs, IPsec/GRE VPN, SSH, Device Hardening

Monitoring & Automation: SNMP, Syslog, QoS Fundamentals, REST APIs, JSON, Ansible (intro)

Wireless & Tools: WLC-Based Wireless Architecture, WPA2/WPA3, Cisco Packet Tracer, VMware

TRAINING & LAB EXPERIENCE

Physical Hardware Labs — *CSL Training (CCNA Track)*

- Achieved full physical-layer connectivity across live Cisco switches and routers, verified via cable tester and continuity checks, by performing structured UTP cable crimping and testing.
- Enabled secure CLI and SSH access on every lab device, confirmed through successful authenticated remote login, by configuring hostnames, IP addressing, and passwords from a blank device state.
- Delivered validated inter-VLAN connectivity on physical switch and router hardware, confirmed end-to-end via ping and traceroute, by designing, building, and troubleshooting VLAN and routing configurations.

Enterprise LAN Simulation — *Cisco Packet Tracer*

- Built a multi-site enterprise network topology spanning multiple routers, switches, and end devices, validated through complete end-to-end connectivity testing, by planning IP addressing and inter-site routing paths.
- Enforced consistent VLAN propagation across the topology, measured by zero VLAN mismatch errors during verification, by configuring VTP, 802.1Q trunking, and Router-on-a-Stick inter-VLAN routing.
- Delivered dynamic addressing and internet access to every network segment, confirmed via successful DHCP leases and NAT translations, by deploying DHCP alongside static/dynamic/PAT NAT and OSPF/RIP routing.
- Increased link redundancy between core switches, verified through successful failover testing with zero traffic loss, by configuring EtherChannel with LACP and applying VLSM-based subnetting.

EDUCATION

BSc in Computer Science & Engineering — Northern University Bangladesh (Final Year, expected Dec 2026)

Higher Secondary Certificate (HSC) — Gazipur Science College, 2021

TRAINING & CERTIFICATIONS

- CCNA (200-301 v1.1) — Training completed, CSL Training, 2026 (vendor exam pending)
- ISP Setup & Administration using MikroTik — CSL Training, ongoing
- Professional Networking Course — Udemy (David Bombal), 2025
- Full Stack Web Development — Udemy (Dr. Angela Yu), 2025
- Complete Web Development — Programming Hero, 2026

ADDITIONAL SKILLS

Web Development (MERN Stack): MongoDB, Express.js, React, Node.js, Next.js, JavaScript

LANGUAGES

Bangla, English
