SUMMARY

Final-year CSE undergraduate specializing in network engineering and IT infrastructure, with hands-on training in Cisco routing/switching and MikroTik RouterOS administration. Comfortable configuring and troubleshooting VLANs, inter-VLAN routing, OSPF/BGP, NAT, ACLs, VPNs, and wireless deployments across both Cisco and MikroTik platforms. Also builds web-based tools using the MERN stack to support network monitoring and automation.

CORE NETWORKING SKILLS

Routing & Switching: Cisco IOS, VLAN, VTP, 802.1Q Trunking, Inter-VLAN Routing (Router-on-a-Stick), STP/Rapid PVST+, EtherChannel/LACP, Port Security, DHCP Snooping, Dynamic ARP Inspection

Routing & IP Services: OSPF, BGP, RIP, Static & Floating Static Routing, HSRP (FHRP), DHCP, DNS, NAT (Static/Dynamic/PAT), NTP, VLSM/Subnetting, IPv4 & IPv6 Addressing

Security & Access: Standard & Extended ACLs, IPsec/GRE VPN, SSH, AAA (RADIUS/TACACS+ concepts), Device Hardening, Firewall Filter/NAT/Mangle (MikroTik)

MikroTik RouterOS: WinBox, CLI & Webfig Administration, PPPoE (ISP Setup), Hotspot with RADIUS, Bandwidth Management (PCQ Queues, Burst), Bridging, VLAN, Bonding, Scripting & Scheduler, Web Proxy

Monitoring & Automation: SNMP, Syslog, QoS Fundamentals, REST APIs, JSON, Postman, Ansible (intro), SDN Concepts

Wireless & Tools: WLC-Based Wireless Architecture, WPA2/WPA3, Cisco Packet Tracer, Wireshark, VMware

PRACTICAL EXPERIENCE

Physical Hardware Labs — CSL Training (CCNA & MikroTik Tracks)

- Performed UTP cable crimping and testing, and verified physical-layer connectivity on live Cisco and MikroTik equipment.
- Configured routers and switches via CLI (hostname, interfaces, IP addressing, passwords, SSH access) on physical devices.
- Built and verified VLANs and inter-VLAN routing on live switch and router hardware.
- Configured and tested wireless access points (SSID, WPA2 security) in a live lab environment.
- Diagnosed and resolved connectivity issues on physical equipment using ping, traceroute, and systematic troubleshooting.

Networking Project — Enterprise LAN Simulation (Cisco Packet Tracer)

Designed and implemented a multi-site network topology with 3 routers, 4 switches, and 40 end devices.

- Configured VLANs and inter-VLAN routing using Router-on-a-Stick; enforced VLAN propagation with VTP and 802.1Q trunking.
- Deployed DHCP and NAT for dynamic addressing and internet access; configured OSPF and RIP alongside static routing.
- Applied VLSM/subnetting to optimize IP address allocation across the topology.
- Configured EtherChannel with LACP for redundant, load-balanced switch links.
- Validated end-to-end connectivity and resolved configuration issues through systematic troubleshooting.

EDUCATION

BSc in Computer Science & Engineering — Northern University Bangladesh

Final Year

TRAINING & CERTIFICATIONS

CCNA (200-301 v1.1) Training — CSL Training	2026
ISP Setup & Administration using MikroTik — CSL Training	2026
Professional Networking Course — Udemy (David Bombal)	2025
Full Stack Web Development — Udemy (Dr. Angela Yu)	2025
Complete Web Development — Programming Hero	2026

ADDITIONAL SKILLS

Web Development (MERN Stack): MongoDB, Express.js, React, Node.js, Next.js, JavaScript, Node.js
